

CASE STUDY

BLACKTOWN HOSPITAL

REDEVELOPMENT STAGE 1 BLACKTOWN NSW

The Blacktown Hospital Redevelopment Stage 1 project included a 5-storey new inpatient building, 185 in-patient beds, additional outpatient clinics, a new in-centre renal dialysis unit and cancer care centre, medical imaging, pharmacy and retail spaces. Completed in 2016, the \$312 million project was designed following Green Star requirements by architects Jacobs.

Wattyl was selected as the preferred coatings supplier for this project due to the excellent low VOC interior product properties, supported with accurate colour sample services.

The building interior was painted using Wattyl I.D, in a variety of bright colours, with the intended purpose of designating different sections of the hospital. Externally, Wattyl Solagard® was used in various areas, matching the large facade panels which make up much of the external structures. GranolImpact was also applied to the hospital exterior, delivering a high profile textured finish.

PRODUCTS FEATURED

External Walls:	Solagard® Low Sheen
External Texture:	Wattyl GranolImpact
Internal Walls:	Wattyl I.D*
Internal Ceilings:	Wattyl I.D*
Trims:	Wattyl Aqua Trim*

PROJECT TEAM

Developer:	NSW Health Infrastructure
Architect:	Jacobs Group (Australia) Pty Ltd
Builder:	Laing O'Rourke
Paint Contractor:	AK & D Pty Ltd
